## SUBJECT INDEX

### VOLUME 42 (1977)

- Aberration, yields, in human lymphocytes, effect of X-ray-induced mitotic delay on, 401
- Aberrations, chromatid, intrachromosomal distribution of, by *N*-methyl-*N*-nitrosourethane, in *Triticum durum*, 453
- , chromosomal and chromatid, recovery of, in plant seeds treated with propyl methanesulphonate, 51
- , in mouse embryos, after paternal treatment with triethylenemelamine, 117
- , in pig leucocytes, after  $\gamma$ -irradiation, 395
- Acetanilide, in *B. subtilis* test systems, 19
- 2-Acetylaminofluorene, direct treatment of *B. subtilis* DNA, 175
- Aflatoxin,  $B_1$ , metabolites, reactivation of UV-damaged phage lambda in *E. coli* host cells treated with, 205
- Aldrin, in cultured human cells, 161
- Alga, blue-green, nitrate regulation of heterocyst differentiation and nitrogen fixation in chlorate-resistant mutant, 447
- 9-Aminoacridine, in *S. typhimurium*, 327
- 4-Aminoquinoline 1-oxide, in *B. subtilis* test systems, 19
- Analogue, bifunctional and water-soluble, of 1,3-bis(2-chloroethyl)-1-nitrosourea, in *S. cerevisiae*, genetic effects, 45
- Anthocyanin, production, in flowers of Petunia, induced unstable systems, 235
- Anthranilic acid, in *B. subtilis* test systems, 19
- Anti-cancer, agent, 1,3-bis(2-chloroethyl)-1-nitrosourea, genetic effects of analogues, in *S. cerevisiae*, 45
- Assay, host-mediated, influence of pH on effects of 2,4-dichlorophenoxyacetic acid on yeast, 3
- Assays, dominant lethal, in male mouse, 269
- Auxotrophic mutations, suppressible, applications of *B. subtilis* test systems for mutagens, involving, 19
- Auxotrophs, specific, selection of, of *S. cerevisiae*, using temperature-sensitive suicide mutants, 215
- Bacillus subtilis*, DNA, direct treatment, 175
- , test systems, for mutagens, involving DNA-repair deficiency, and suppressive auxotrophic mutations, 19
- Barley, embryo, repair of radiation-induced breaks, 71
- , seeds, treated with propyl methanesulphonate, repair of damage, 51
- , single-strand breaks, by sodium azide, at pH 3, 65
- Base, strains, of *Drosophila*, spontaneous non-reciprocal mutation and sterility, 89
- Benzene hexachloride,  $\alpha$  and  $\beta$ , in *B. subtilis* test systems, 19
- Benzo(a)pyrene, in *B. subtilis* test systems, 19
- 1,3-Bis(2-chloroethyl)-1-nitrosourea, genetic effects of analogues of, in *S. cerevisiae*, 45
- Blood, peripheral, lymphocytes, cultured, chromosomal radiosensitivity and karyotype in mice using, 379
- Bone marrow, cells, of mouse, effect of exposure rate on translocation induction, 99
- , of mouse, cytological effects of carofur, 109
- Breakage, of DNA, sulphhydryl-mediated, by phleomycin, in *E. coli*, 181
- Breaks, chromosome, cyclophosphamide-induced, non-random distribution, 125
- , of DNA, single-strand, in plant seeds treated with propyl methanesulphonate, 51
- , single-strand, in barley, by sodium azide, at pH 3, 65
- , —, radiation-induced, in DNA of barley embryo, repair of, 71
- , unrepaired, double-strand, in nuclear DNA, lethality, 131
- N*-n-Butyl-*N*-nitrosourethane, in *B. subtilis* test systems, 19
- N*-n-Butylurethane, in *B. subtilis* test systems, 19

- Caffeine, and mutagenic DNA repair in *E. coli*, 33
- Captan, in cultured human cells, 161
- Carbaryl, in cultured human cells, 161
- Carofur, cytological effects, 109
- CD1, mouse, dominant lethal assays, 269
- Cell, cultures, mammalian, mutagenesis by fluorescent light, 139
- , HeLa, replicons, inhibition of initiation of, by methyl methanesulphonate, 299
  - , survival, relation between induced mutation frequency and, 145
- Cells, of Chinese hamster, thioguanine-resistant mutants by  $\gamma$ -rays, 313
- , host, of *E. coli*, treated with aflatoxin, reactivation of UV-damaged phage lambda in, 205
  - , human, cultured, pesticide-induced DNA damage, and its repair, 161
  - , —, UV-irradiated, inhibition of repair, 413
  - , mammalian, in culture, prospects for evaluating genetic damage in, 279
  - , somatic and germ, of mouse, effect of exposure rate on translocation induction, 99
- Chinese hamster, cells, effects of carofur, 109
- , —, thioguanine-resistant mutants by  $\gamma$ -rays, 313
  - , embryos, pre-implantation, *in vitro*, culture of, 373
  - , ovary cells, mutagenesis by fluorescent light, 139
- Chlorate-resistant, mutant, of blue-green alga, nitrate regulation of heterocyst differentiation and nitrogen fixation, 447
- Chlordane, in cultured human cells, 161
- 5-Chloro-8-hydroxyquinoline, in *S. typhimurium*, 335
- 2-Chloroquinoline, mutagenicity testing, 335
- Chlorozotocin, in *S. cerevisiae*, 45
- Chromatid, aberrations, intrachromosomal distribution of, by *N*-methyl-*N*-nitrosourethane, in *Triticum durum*, 453
- , exchanges, sister, in cultured human lymphocytes, 305
  - , gaps, X-ray-induced, ultrastructural observations of, 249
- Chromosomal, radiosensitivity, and karyotype in mice, using cultured peripheral blood lymphocytes, 379
- Chromosome, aberrations, and dominant lethality of mouse embryos after paternal treatment with triethylenemelamine, 117
- , breaks, cyclophosphamide-induced, non-random distribution, 125
- Chromosomes, mammalina, ultrastructural observations of X-ray-induced chromatid gaps, 249
- Chronic,  $\gamma$ -irradiation, mouse oocyte dominant-lethal response to, 357
- Conversion, induction, in nuclear DNA, manganese in yeast, 343
- Cortisone acetate, in *B. subtilis* test systems, 19
- Cranston, strains, of *Drosophila*, spontaneous non-reciprocal mutation and sterility, 89
- Cricetulus griseus*, cells, cytological effects of carofur, 109
- , embryos, pre-implantation, culture of, *in vitro*, 373
- Culture, of pre-implantation Chinese hamster embryos *in vitro*, 373
- Cultured, human, cells, pesticide-induced damage, and its repair, 161
- , —, lymphocytes, sister chromatid exchanges, 305
  - , mammalian, cells, prospects for evaluating genetic damage in, 279
- Cultures, of mammalian cells, mutagenesis by fluorescent light, 139
- Cyclophosphamide, non-random distribution of breaks, 125
- Cytological, effects, of carofur, 109
- Damage, of DNA, pesticide-induced, and repair, in cultured human cells, 161
- , genetic, in mammalian cells in culture, prospects for evaluation of, 279
- DDT, in cultured human cells, 161
- Decline, of mutation frequency, in excision-proficient strain of *E. coli*, 33
- Delay, mitotic, X-ray-induced, effect on aberration yields in human lymphocytes, 401
- Deoxyadenosine, and inhibition of repair in UV-irradiated human cells, 413
- Derivatives, of 2-acetylaminofluorene, direct treatment of *B. subtilis* DNA, 175
- , *polA1* and *recA1*, of mutator strains of *E. coli*, frame-shift mutability of, 443
  - , of quinoline, mutagenicities, 335
- Design, experimental, evaluation of, and dominant lethal assays in CD1 mouse, 269
- 2,4-D fluid, in cultured human cells, 161
- 5,7-Dibromo-8-hydroxyquinoline, in *S. typhimurium*, 335
- Di-n-butylamine, in *B. subtilis* test systems, 19
- Di-n-butylnitrosamine, in *B. subtilis* test systems, 19

- 5,7-Dichloro-8-hydroxyquinoline, in *S. typhimurium*, 335
- 2,4-Dichlorophenoxyacetic acid, influence of pH on effects of, on *S. cerevisiae* and *S. typhimurium*, 3
- 4,7-Dichloroquinoline, in *S. typhimurium*, 335
- Dieldrin, in cultured human cells, 161
- Differentiation, heterocyst, nitrate regulation of, in chlorate-resistant mutant of blue-green alga, 447
- 2,4-Dihydroxyquinoline, in *S. typhimurium*, 335
- Dimethoate, in cultured human cells, 161
- 4-Dimethylaminostilbene, in *B. subtilis* test systems, 19
- Diquat, in cultured human cells, 161
- Direct, treatment, of *B. subtilis* DNA, 175
- Distribution, intrachromosomal, of aberrations, by N-methyl-N-nitrosourethane, in *Triticum durum*, 453
- , non-random, of cyclophosphamide-induced breaks, 125
- DNA, breakage, sulphhydryl-mediated, by phleomycin, in *E. coli*, 181
- , breaks, single strand, in plant seeds treated with propyl methanesulphonate, 51
- , of *B. subtilis*, direct treatment, 175
- , damage, pesticide-induced, and repair, in cultured human cells, 161
- , nuclear, conversion induction in, manganese treatment of yeast, 343
- , —, unrepaired double-strand breaks, and lethality, 131
- , repair, mutagenic, in *E. coli*, 33
- , repair deficiency, application of *B. subtilis* test systems for mutagens, involving, 19
- , synthesis, semi-conservative, in xeroderma pigmentosum and normal human skin fibroblasts, UV-irradiation, 433
- Dominant lethal, assays, in male mice, 269
- , mutations, in male mouse, by methyl methanesulphonate, 135
- , response, of mouse oocyte, to chronic  $\gamma$ -irradiation, 357
- , test, aberrations in mouse embryos, after paternal treatment with triethylenemelamine, 117
- Dominant lethality, of mouse embryos after paternal treatment with triethylenemelamine, 117
- Double-strand breaks, unrepaired, in nuclear DNA, 131
- Drosophila melanogaster*, spontaneous mutation in strain crosses, 89
- , temperature-sensitive mutations, hycanthone mutagenesis, 349
- Embryo, of barley, repair of radiation-induced breaks, 71
- Embryos, of Chinese hamster, pre-implantation, *in vitro*, culture of, 373
- , of mouse, aberrations after paternal treatment with triethylenemelamine, 117
- Endoxan, non-random distribution of breaks, 125
- Escherichia coli*, frame-shift mutability of *polA1* and *recA1* derivatives of mutator strains of, 443
- , host cells, treated with aflatoxin, reactivation of UV-damaged phage lambda in, 205
- , lethal effect of nitrous acid, 191
- , mutagenic DNA repair, 33
- , sulphhydryl-mediated DNA breakage by phleomycin, 181
- Ethionine, in *B. subtilis* test systems, 19
- Ethyl methanesulphonate, DNA repair in *E. coli*, 33
- Ethynylestradiol, in *B. subtilis* test systems, 19
- Eukaryotes, relation between induced mutation frequency and cell survival, 145
- Evaluation, of experimental design of CD1 mice, dominant lethal assay, 269
- , of genetic damage, in mammalian cells in culture, prospects for, 279
- Exchanges, sister chromatid, in cultured human lymphocytes, 305
- Excision-proficient, strain of *E. coli*, mutagenic DNA repair, 33
- Experimental, design, evaluation of, and dominant lethal assays in CD1 mouse, 269
- Exposure, rate, effect of, on translocation induction in mouse cells, 99
- Fibroblasts, of normal and xeroderma pigmentosum skin, semi-conservative DNA synthesis, 433
- Fixation, of nitrogen, in chlorate-resistant mutant of blue-green alga, 447
- Flowers, of Petunia, induced unstable systems, 235
- Fluorescein sodium, in *B. subtilis* test systems, 19
- Fluorescent light, mutagenesis in mammalian cell cultures, 139
- Fly, onion, sperm of, X-irradiation, 79
- Frame-shift, mutability, of *polA1* and *recA1* derivatives of mutator strains of *E. coli*, 443

- , mutagen, for *S. typhimurium* TA 1537, 9-aminoacridine, activity, 327
- Frequency, decline, of mutation, in excision-proficient strain of *E. coli*, 33
- , of mutation, and cell survival, relation between, 145
- Furylfuramide, applications of *B. subtilis* test systems, 19
- Gaps, chromatid, X-ray-induced, ultrastructural observations of, 249
- Generations,  $F_0$  and  $F_1$ , genetic control in X-irradiated *Hylemya antiqua*, 79
- Genetic, control, of *Hylemya antiqua*, X-irradiation, 79
- , damage, in mammalian cells in culture, prospects for evaluation of, 279
- , effects, of new analogues, of 1,3-bis(2-chloroethyl)-1-nitrosourea, in *S. cerevisiae*, 45
- Germ, cells, of mouse, effect of exposure rate on translocation induction, 99
- HeLa, cell, replicons, inhibition of initiation of, by methyl methanesulphonate, 299
- Heptachlor, in cultured human cells, 161
- Heptachlor-epoxy, in cultured human cells, 161
- Heterocyst, differentiation, nitrate regulation of, of chlorate-resistant mutant of blue-green alga, 447
- Heterozygotes, recessive lethal, from inbred strains of mouse, 363
- Hoechst compound 37 507, direct treatment of *B. subtilis* DNA, 175
- Hordeum distichum*, embryo, repair of radiation-induced single-strand breaks, 71
- Hordeum vulgare*, seeds, treated with propyl methanesulphonate, repair of damage, 51
- Host, cells, of *E. coli*, treated with aflatoxin, reactivation of UV-damaged phage lambda in, 205
- Host-mediated assay, influence of pH on effects of 2,4-dichlorophenoxyacetic acid on yeast, 3
- Human, cells, cultured, pesticide-induced DNA damage, and its repair, 161
- , —, UV-irradiated, inhibition of repair, 413
- , leucocytes, effects of carofur, 109
- , lymphoblasts, *hprt* locus, activity of 9-aminoacridine, 327
- , lymphocytes, cultured, sister chromatid exchanges, 305
- , —, effect of X-ray-induced mitotic delay on aberration yields, 401
- , —, mutagenic effect of endoxan, 125
- , skin fibroblasts, normal and xeroderma pigmentosum, semi-conservative DNA synthesis, 433
- Hycanthone methanesulphonate, in *D. melanogaster*, temperature sensitivity, 349
- N-Hydroxy-2-acetylaminofluorene, direct treatment of *B. subtilis* DNA, 175
- 1-( $\omega$ -Hydroxyalkyl)-3-(2-chloroethyl)-3-nitrosoureas, in *S. cerevisiae*, 45
- 3-Hydroxyanthranilic acid, in *B. subtilis* test systems, 19
- 8-Hydroxyquinoline, testing in *S. typhimurium*, 335
- 8-Hydroxyquinoline-5-sulphonic acid, in *S. typhimurium*, 335
- Hydroxyurea, and inhibition of repair in UV-irradiated human cells, 413
- Hylemya antiqua*, genetic control, X-radiation, 79
- Implantation, pre-, Chinese hamster embryos, *in vitro*, culture of, 373
- Inbred, strains, of mouse, frequency of recessive lethal heterozygotes, 363
- Inhibition, of initiation, of HeLa cell replicons by methyl methanesulphonate, 299
- , of repair, in UV-irradiated human cells, 413
- Initiation, of HeLa cell replicons, inhibition by methyl methanesulphonate, 299
- Intrachromosomal, distribution, of aberrations, by N-methyl-N-nitrosouethane, in *Triticum durum*, 453
- Irradiation,  $\gamma$ , breaks in DNA of barley embryo, 71
- , —, chronic, mouse oocyte dominant-lethal response to, 357
- , —, half- or whole-body, aberrations in pig leucocytes, 395
- , —, thioguanine-resistant mutants of Chinese hamster cells by, 313
- ,  $\gamma$  and X, in mouse cells, effect of exposure rate on translocation induction, 99
- , ionizing, unrepaired double-strand breaks in nuclear DNA, 131
- , UV, in human cells, inhibition of repair, 413
- , —, mutagenic DNA repair in *E. coli*, 33
- , —, in phage lambda, reactivation of, in *E. coli* host cells treated with aflatoxin, 205
- , —, semi-conservative DNA synthesis in xeroderma pigmentosum and normal human skin fibroblasts, 433
- , UV and X, applications of *B. subtilis* test systems, 19
- , X, chromosomal radiosensitivity and

- karyotype in mice, using cultured peripheral blood lymphocytes, 379
- , —, effect of mitotic delay on aberration yields in human lymphocytes, 401
- , —, genetic control of *Hylemya antiqua*, 79
- , —, molecular specificity of, and its repair in *S. cerevisiae*, 223
- , —, ultrastructural observations of chromatid gaps, 249
- Isoquinoline, in *S. typhimurium*, 335
- Karyotype, chromosomal radiosensitivity and, in mice, using cultured peripheral blood lymphocytes, 379
- Lethal, effect, of nitrous acid, in *E. coli*, 191
- Lethality, dominant, in mouse embryos after paternal treatment with triethylenemelamine, 117
- , and sterility, in strain crosses of *Drosophila*, 89
- , and unrepaired double-strand breaks in nuclear DNA, 131
- Leucocytes, of human, effects of carofur, 109
- , of pig, aberrations after  $\gamma$ -irradiation, 395
- Light, fluorescent, mutagenesis, in mammalian cell cultures, 139
- Lindane, in cultured human cells, 161
- Locus, *hgprt*, in human lymphoblasts, activity of 9-aminoacridine, 327
- Lymphoblasts, human, *hgprt* locus, activity of 9-aminoacridine, 327
- , cultured, human, sister chromatid exchanges, 305
- , human, effect of X-ray-induced mitotic delay on aberration yields, 401
- , of human and mouse, cytological effects of carofur, 109
- , mutagenic effect of endoxan, 125
- , of peripheral blood, cultured, chromosomal radiosensitivity and karyotype in mice using, 379
- Male, mouse, dominant lethal assays, 269
- , —, treatment with methyl methanesulphonate, 135
- Mammalian, cell cultures, mutagenesis by fluorescent light, 139
- , —, prospects for evaluating genetic damage in, 279
- , chromosomes, ultrastructural observations of X-ray-induced chromatid gaps, 249
- Man, chromosomal radiosensitivity and karyotype in mice, using cultured peri-
- pheral blood lymphocytes, comparison with, 379
- Manganese, in yeast, 343
- Mechanism, of hycanthone mutagenesis, in *D. melanogaster*, 349
- Metabolites, of aflatoxin B<sub>1</sub>, reactivation of UV-damaged phage lambda in *E. coli* host cells, treated with, 205
- 1-(2-Methanesulphonyloxyethyl)-3-(2-chloroethyl)-3-nitrosourea, in *S. cerevisiae*, 45
- Methionine, in *B. subtilis* test systems, 19
- Methods, statistical, evaluation of, in dominant lethal assays in CD1 mouse, 269
- 2-Methyl-8-hydroxyquinoline, in *S. typhimurium*, 335
- 3-Methylisoquinoline, in *S. typhimurium*, 335
- Methyl methanesulphonate, applications of *B. subtilis* test systems, 19
- , dominant lethal assays in male mouse, 269
- , inhibition of initiation of HeLa cell repli-cons by, 299
- , in male mouse, 135
- N-Methyl-N'-nitro-N-nitrosoguanidine, selection of specific auxotrophs of *S. cerevisiae* using temperature-sensitive suicide mutants, 215
- N-Methyl-N-nitrosourea, in *B. subtilis* test systems, 19
- N-Methyl-N-nitrosourethane, in *Triticum durum*, intrachromosomal distribution of aberrations, 453
- 1,1'-(4-Methyl-m-phenylenebis)-3-(2-chloroethyl)-3-nitrosourea, in *S. cerevisiae*, 45
- 4-Methylquinoline, in *S. typhimurium*, 335
- 6-Methylquinoline, in *S. typhimurium*, 335
- 7-Methylquinoline, in *S. typhimurium*, 335
- 8-Methylquinoline, in *S. typhimurium*, 335
- Methylurea, in *B. subtilis* test systems, 19
- Mitotic, delay, X-ray-induced, effect on aberration yields in human lymphocytes, 401
- Molecular, specificity, of X-radiation, and its repair in *S. cerevisiae*, 223
- Mouse, cells, effects of carofur, 109
- , chromosomal radiosensitivity, and karyotype in, using cultured peripheral blood lymphocytes, 379
- , effect of exposure rate on translocation induction in somatic and germ cells, 99
- , embryos, aberrations after paternal treatment with triethylenemelamine, 117
- , male, dominant lethal assays, 269
- , —, treatment with methyl methanesulphonate, 135

- , oocyte, dominant-lethal response, to chronic  $\gamma$ -irradiation, 357
- , strains, inbred, frequency of recessive lethal heterozygotes, 363
- Mus musculus*, effect of exposure rate on translocation induction in somatic and germ cells, 99
- Mutability, frame-shift, of *polA1* and *recA1* derivatives of mutator strains of *E. coli*, 443
- Mutagen, acetanilide, in *B. subtilis* test systems, 19
- , 2-acetylaminofluorene, direct treatment of *B. subtilis* DNA, 175
- , aldrin, in cultured human cells, 161
- , 9-aminoacridine, in *S. typhimurium*, 327
- , 4-aminoquinoline 1-oxide, in *B. subtilis* test systems, 19
- , anthranilic acid, in *B. subtilis* test systems, 19
- , benzene hexachloride,  $\alpha$  and  $\beta$ , in *B. subtilis* test systems, 19
- , benzo(a)pyrene, in *B. subtilis* test systems, 19
- , 1,3-bis(2-chloroethyl)-1-nitrosourea, genetic effects of analogues, in *S. cerevisiae*, 45
- , *N*-*n*-butyl-*N*-nitrosourethane, in *B. subtilis* test systems, 19
- , *N*-*n*-butylurethane, in *B. subtilis* test systems, 19
- , captan, in cultured human cells, 161
- , carbaryl, in cultured human cells, 161
- , carofur, cytological effects, 109
- , chlordane, in cultured human cells, 161
- , 5-chloro-8-hydroxyquinoline, in *S. typhimurium*, 335
- , chlorozotocin, in *S. cerevisiae*, 45
- , cortisone acetate, in *B. subtilis* test systems, 19
- , cyclophosphamide, non-random distribution of breaks, 125
- , DDT, in cultured human cells, 161
- , 2,4-D fluid, in cultured human cells, 161
- , di-*n*-butylamine, in *B. subtilis* test systems, 19
- , di-*n*-butylnitrosamine, in *B. subtilis* test systems, 19
- , 2,4-dichlorophenoxyacetic acid, influence of pH on effects of, on *S. cerevisiae* and *S. typhimurium*, 3
- , 4,7-dichloroquinoline, in *S. typhimurium*, 335
- , dieldrin, in cultured human cells, 161
- , 2,4-dihydroxyquinoline, in *S. typhimurium*, 335
- , dimethoate, in cultured human cells, 161
- , 4-dimethylaminostilbene, in *B. subtilis* test systems, 19
- , diquat, in cultured human cells, 161
- , endoxan, non-random distribution of breaks, 125
- , ethionine, in *B. subtilis* test systems, 19
- , ethyl methanesulphonate, DNA repair in *E. coli*, 33
- , ethynodiol, in *B. subtilis* test systems, 19
- , fluorescein sodium, in *B. subtilis* test systems, 19
- , furylfuramide, applications of *B. subtilis* test systems, 19
- , heptachlor, in cultured human cells, 161
- , heptachlor-epoxy, in cultured human cells, 161
- , Hoechst compound 37 507, direct treatment of *B. subtilis* DNA, 175
- , hycanthone methanesulphonate, in *D. melanogaster*, temperature sensitivity, 349
- , *N*-hydroxy-2-acetylaminofluorene, direct treatment of *B. subtilis* DNA, 175
- , 1-( $\omega$ -hydroxyalkyl)-3-(2-chloroethyl)-3-nitrosoureas, in *S. cerevisiae*, 45
- , 3-hydroxyanthranilic acid, in *B. subtilis* test systems, 19
- , 8-hydroxyquinoline, testing in *S. typhimurium*, 335
- , 8-hydroxyquinoline-5-sulphonic acid, in *S. typhimurium*, 335
- , lindane, in cultured human cells, 161
- , manganese, in yeast, 343
- , 1-(2-methanesulphonyl-oxyethyl)-3-(2-chloroethyl)-3-nitrosourea, in *S. cerevisiae*, 45
- , methionine, in *B. subtilis* test systems, 19
- , 2-methyl-8-hydroxyquinoline, in *S. typhimurium*, 335
- , methyl methanesulphonate, applications of *B. subtilis* test systems, 19
- , —, dominant lethal assays in male mouse, 269
- , —, inhibition of initiation of Hela cell replicons by, 299
- , —, in male mouse, 135
- , *N*-methyl-*N'*-nitro-*N*-nitrosoguanidine, selection of specific auxotrophs of *S. cerevisiae* using temperature-sensitive suicide mutants, 215
- , *N*-methyl-*N*-nitrosourea, in *B. subtilis* test systems, 19
- , *N*-methyl-*N*-nitrosourethane, in *Triticum durum*, intrachromosomal distribution of aberrations, 453
- , 1,1'-(4-methyl-*m*-phenylenebis)-3-(2-

- chloroethyl)-3-nitrosourea, in *S. cerevisiae*, 45
- , 4-methylquinoline, in *S. typhimurium*, 335
- , 6-methylquinoline, in *S. typhimurium*, 335
- , 7-methylquinoline, in *S. typhimurium*, 335
- , 8-methylquinoline, in *S. typhimurium*, 335
- , methylurea, in *B. subtilis* test systems, 19
- , naphthol, in *B. subtilis* test systems, 19
- , napthylamine,  $\alpha$  and  $\beta$ , in *B. subtilis* test systems, 19
- , nifurprazinum, cytological effects, 109
- , nitrofurazone, in *B. subtilis* test systems, 19
- , nitroquinoline, 6- and 8-, in *S. typhimurium*, 335
- , 4-nitroquinoline 1-oxide, in *B. subtilis* test systems, 19
- , nitrous acid, lethal effect, on *E. coli*, 191
- , pesticide, DNA damage, and repair in cultured human cells, 161
- , phenacetin, in *B. subtilis* test system, 19
- , phleomycin, sulphhydryl-mediated DNA breakage by, in *E. coli*, 181
- , phloxine, in *B. subtilis* test systems, 19
- , 1,1'-polymethylenebis-3-(2-chloroethyl)-3-nitrosoureas, in *S. cerevisiae*, 45
- , propyl methanesulphonate, repair after treatment of plant seeds, 51
- , pyrene, *B. subtilis* test systems, 19
- , quinoline, and its derivatives, 335
- , rotenone, in cultured human cells, 161
- , sodium azide, applied at pH 3 in barley, 65
- , stilbene, in *B. subtilis* test systems, 19
- , triethylenemelamine, paternal treatment, aberrations of mouse embryos, 117
- Mutagenic, DNA repair, in *E. coli*, 33
- Mutagenicities, of quinoline and derivatives, 335
- Mutant, chlorate-resistant, of blue-green alga, nitrate regulation of heterocyst differentiation and nitrogen fixation, 447
- Mutants, suicide, temperature-sensitive, selection of specific auxotrophs of *S. cerevisiae* using, 215
- , thioguanine-resistant, of Chinese hamster cells, by  $\gamma$ -rays, 313
- Mutation, frequency, and cell survival, relation between, 145
- , frequency decline, in excision-proficient strain, of *E. coli*, 33
- , spontaneous, and sterility, in strain crosses of *D. melanogaster*, 89
- Mutations, auxotrophic, suppressible, applications of *B. subtilis* test systems for mutagens, involving, 19
- , dominant lethal, in male mouse, by methyl methanesulphonate, 135
- , temperature-sensitive, in *D. melanogaster*, hycanthone mutagenesis, 349
- Mutator, strains, of *E. coli*, frame-shift mutability of *polA1* and *recA1* derivatives of, 443
- Naphthol, in *B. subtilis* test systems, 19
- Napthylamine,  $\alpha$  and  $\beta$ , in *B. subtilis* test systems, 19
- Nifurprazinum, cytological effects, 109
- Nitrate, regulation, of heterocyst differentiation, of chlorate-resistant mutant of blue-green alga, 447
- Nitrofurazone, in *B. subtilis* test systems, 19
- Nitrogen fixation, in chlorate-resistant mutant of blue-green alga, 447
- Nitroquinoline, 6- and 8-, in *S. typhimurium*, 335
- 4-Nitroquinoline 1-oxide, in *B. subtilis* test systems, 19
- Nitrous acid, lethal effect, on *E. coli*, 191
- Nostoc muscorum*, nitrate regulation of heterocyst differentiation and nitrogen fixation in chlorate-resistant mutant, 447
- Nuclear, DNA, conversion induction in, manganese treatment of yeast, 343
- , unrepaired double-strand breaks, 131
- Obituary, note, Arnold H. Sparrow, 1
- Onion fly, sperm, X-irradiation, 79
- Oocyte, of mouse, dominant-lethal response, to chronic  $\gamma$ -irradiation, 357
- Ovarian, cells, of Chinese hamster, mutagenesis by fluorescent light, 139
- Paternal, treatment, with triethylenemelamine, aberrations of mouse embryos, 117
- Peripheral, blood lymphocytes, cultured, chromosomal radiosensitivity and karyotype in mice using, 379
- Pesticides, DNA damage, and repair in cultured human cells, 161
- Petunia, induced unstable systems, in, 235
- pH, 3, breaks in barley by sodium azide, 65
- , influence of, on effects of 2,4-D, on *S. cerevisiae* and *S. typhimurium*, 3
- Phage, lambda, UV-damaged, reactivation of, in *E. coli* host cells treated with aflatoxin, 205
- Phenacetin, in *B. subtilis* test system, 19
- Phleomycin, sulphhydryl-mediated DNA breakage by, in *E. coli*, 181

- Phloxine, in *B. subtilis* test systems, 19
- Pig, leucocytes, aberrations after  $\gamma$ -irradiation, 395
- Plant, seeds, treated with propyl methanesulphonate, repair of damage, 51
- polA1*, derivatives, and *recA1*, of mutator strains of *E. coli*, frame-shift mutability of, 443
- 1,1'-Polymethylenebis-3-(2-chloroethyl)-3-nitrosoureas, in *S. cerevisiae*, 45
- Post-replication, repair, error-free, in excision-proficient strain, of *E. coli*, 33
- Propyl methanesulphonate, repair after treatment of plant seeds, 51
- Pyrene, in *B. subtilis* test systems, 19
- Quinoline, and its derivatives, 335
- Quinoline-2-carboxylic acid, in *S. typhimurium*, 335
- Quinoline-8-sulphonyl chloride, in *S. typhimurium*, 335
- Radiosensitivity, chromosomal, and karyotype in mice, using cultured peripheral blood lymphocytes, 379
- Rate of exposure, effect of, on translocation induction, in mouse cells, 99
- Reactivation, induced, of UV-damaged phage lambda, in *E. coli* K12 host cells, treated with aflatoxin B<sub>1</sub> metabolites, 205
- recA1*, derivatives, and *polA1*, of mutator strains of *E. coli*, frame-shift mutability of, 443
- Recessive lethal, heterozygotes, from inbred strains of mouse, 363
- Regulation, of nitrate, of heterocyst differentiation, of chlorate-resistant mutant of blue-green alga, 447
- Repair, deficiency, of DNA, application of *B. subtilis* test systems for mutagens, involving, 19
- , of mutagenic DNA, in *E. coli*, 33
  - , of pesticide-induced damage, in cultured human cells, 161
  - , post-replication, error-free, in excision-proficient strain, of *E. coli*, 33
  - , of radiation-induced breaks in DNA of barley embryo, 71
  - , of single-strand DNA breaks, in plant seeds treated with propyl methanesulphonate, 51
  - , in UV-irradiated human cells, inhibition of, 413
  - , of X-ray damage, in *S. cerevisiae*, 223
- Replicons, HeLa cell, inhibition of initiation of, by methyl methanesulphonate, 299
- Rotenone, in cultured human cells, 161
- Saccharomyces cerevisiae*, genetic effects of analogues of 1,3-bis(2-chloroethyl)-1-nitrosourea, 45
- , influence of pH on effects of 2,4-dichlorophenoxyacetic acid, 3
  - , molecular specificity of X-radiation and its repair, 223
  - , selection of specific auxotrophs of, using temperature-sensitive suicide mutants, 215
  - , unrepaired double-strand breaks in nuclear DNA, 131
- Salmonella typhimurium*, 9-aminoacridine treatment, 327
- , influence of pH on effects of 2,4-dichlorophenoxyacetic acid, 3
  - , mutagenicities of quinoline and its derivatives, 335
- Seeds, of barley, breaks by sodium azide, at pH 3, 65
- , of plant, treated with propyl methanesulphonate, repair of damage, 51
- Selection, of specific auxotrophs of *S. cerevisiae*, using temperature-sensitive suicide mutants, 215
- Sensitivity, of CD1 mouse, in dominant lethal assays, 269
- , of temperature, in *D. melanogaster*, hyacinthone mutagenesis, 349
- Simulation, study, random-number, frequency of recessive lethal heterozygotes among inbred strains of mouse, 363
- Single-strand, breaks, in barley, by sodium azide, at pH 3, 65
- , —, radiation-induced, in DNA of barley embryo, repair of, 71
- Sister, chromatid, exchanges, in cultured human lymphocytes, 305
- Skin, fibroblasts, normal and xeroderma pigmentosum, semi-conservative DNA synthesis, 433
- Sodium azide, applied at pH 3 in barley, 65
- Somatic, cells, of mouse, effect of exposure rate on translocation induction, 99
- South Amherst, strain, of *Drosophila*, spontaneous non-reciprocal mutation and sterility, 89
- Sparrow, Arnold H., obituary note, 1
- Specificity, molecular, of X-radiation, and its repair in *S. cerevisiae*, 223
- Sperm, of *Hylemya antiqua*, X-irradiation, 79
- Spermatogonia, of mouse, effect of exposure rate on translocation induction, 99
- Spontaneous, non-reciprocal mutation, and sterility, in strain crosses of *Drosophila*, 89
- Statistical, methods, evaluation of, in domi-

- nant lethal assays in CD1 mouse, 269  
 Sterility, and spontaneous mutation in strain crosses of *Drosophila*, 89  
 Stilbene, in *B. subtilis* test systems, 19  
 Strain, crosses, of *Drosophila*, spontaneous mutation and sterility, 89  
 —, excision-proficient, of *E. coli*, mutagenic DNA repair, 33  
 —, of mouse, inbred, frequency of recessive lethal heterozygotes, 363  
 —, mutator, of *E. coli*, frame-shift mutability of *polA1* and *recA1* derivatives of, 443  
 —, TA100 and TA98, of *S. typhimurium*, mutagenicities of quinoline and its derivatives, 335  
 Study, simulation, random-number, frequency of recessive lethal heterozygotes among inbred strains of mouse, 363  
 Suicide, mutants, temperature-sensitive, selection of specific auxotrophs of *S. cerevisiae* using, 215  
 Sulphydryl-mediated, DNA breakage, by phleomycin in *E. coli*, 181  
 Survival, of cells, relation between induced mutation frequency and, 145  
 Synthesis, DNA, semi-conservative, in xeroderma pigmentosum and normal human skin fibroblasts, UV-irradiation, 433  
 Systems, unstable, induced, in Petunia, 235  
 Technique, QM, non-random distribution of endoxan-induced breaks, 125  
 Temperature, sensitivity, in *D. melanogaster*, hycanthone mutagenesis, 349  
 Temperature-sensitive, suicide mutants, optimal conditions for selecting specific auxotrophs of *S. cerevisiae* using, 215  
 Test, dominant-lethal, aberrations in mouse embryos, after paternal treatment with triethylenemelamine, 117  
 Test systems, of *B. subtilis*, for mutagens, involving DNA-repair deficiency, 19  
 Thioguanine, resistant mutants, of Chinese hamster cells, by  $\gamma$ -rays, 313  
 Translocation, induction, in mouse cells, effect of exposure rate on, 99  
 Triethylenemelamine, paternal treatment, aberrations of mouse embryos, 117  
*Triticum durum*, Desf., intrachromosomal distribution of aberrations induced by N-methyl-N-nitrosourethane, 453  
 Ultrastructural, observations, of X-ray-induced chromatid gaps, 249  
 Unstable, systems, induced, in Petunia, 235  
 Xeroderma pigmentosum, cells, and normal human cells, UV-irradiated, inhibition of repair, 413  
 —, skin fibroblasts, semi-conservative DNA synthesis, 433  
 Yeast, genetic effects of analogues of 1,3-bis(2-chloroethyl)-1-nitrosourea, 45  
 —, influence of pH on effects of 2,4-dichlorophenoxyacetic acid, 3  
 —, manganese mutagenesis, 343  
 —, molecular specificity of X-radiation and its repair, 223
